Research Information Systems develops products to support the information management needs of today's researchers. Our flagship product, Reference Manager™, was first released in 1984 and is the most popular program of its type in the world.

Reference Manager functions as a support tool for the busy researcher who needs quick access to important information, but often has little time to locate such references. It is much more than a data management system, however. The ability to generate bibliographies from word processing documents is an integral feature unmatched by any other product of this kind.

Yet, for all its power, the Reference Manager system is remarkably simple to learn and use. A sample database and tutorial are included with the initial program as is complete documentation and on-line help.

Each edition provides you with the exceptional database management capabilities that have made Reference Manager the preferred choice throughout the world. Pre-designed journal formats are provided along with the ability to create additional journal formats specific to your needs.

The Professional Edition includes unlimited technical support free of charge, and the Special Edition allows for 90 days of free technical support.

RIS looks forward to having you join the tens of thousands of satisfied customers throughout the world who are enjoying the benefits of Reference Manager.

SYSTEM SELECTIONS

Professional Edition

A system you will rely on throughout your research career. Provides one database of up to 65,000 references with DOS, Microsoft®Windows™ and NEC 9801 (32,000 with Apple® Macintosh®) and additional databases of 200 references each. The Professional Edition includes the 100+ Journal Formats and Splicer modules.

The 100+ Journal Formats module provides over 100 predefined journal formats that you can use. The Splicer module allows you to operate Reference Manager from within your word processing program! Splicer functions as a memory-resident ("pop-up" or TSR) program on computers running DOS, a Windows application on computers running Windows, or a Desk Accessory on the Macintosh. You can "pop-up" Reference Manager, retrieve and mark the appropriate references, and automatically "cut and paste" the reference identifiers directly into your text. It is compatible with most major word processing software. (Splicer is not available for NEC 9801 version).

Special Edition

(available exclusively through selected College and University bookstores)
Provides storage of up to 400 references per database. Includes all the capabilities of the Professional Edition.

Companion Package

Available for those who prefer the storage of a Reference Manager database on a combination of DOS, Windows and Macintosh systems. The Reference Manager Companion Package provides a registered user of one type of system the option of adding another type of system for a nominal charge. (For Professional Edition users only.)

OPTIONAL SELECTIONS

Capture Module

Automatically transfers references downloaded from selected national database services (on-line and CD-ROM) into your Reference Manager database, either in batch or selectively. Keywords and/or abstracts may be included. Capture allows on-screen viewing of the original file during the import process and checks for duplicate references.

Special Database Conversion Service

A special conversion service is available to users of other systems switching to Reference Manager. We may be able to convert your ProCite, Papyrus, dBase or text files. Please contact our Technical Support staff for further information and a price quote. A conversion utility is included with the optional Capture module for REF-11 and EndNote files.

Maintenance Service

The Maintenance Service is a one-year service providing you with minor upgrades, discounts on major releases, new or modified Capture module definitions for on-line and CD-ROM services and technical notes. As changes are implemented in products that you use, such as word processors or data services, our programming staff makes corresponding changes to Reference Manager. Such changes are always available to registered users at a modest cost. However, the Reference Manager Maintenance Service enables you to receive all program modifications (except for major new releases) automatically and at no extra cost.

SYSTEM REQUIREMENTS

Microsoft® Windows™
IBM/AT and 100% compatibles, including the IBM PS/2
Windows 3.1
Memory requirements:
2 Megabytes required
4 Megabytes recommended
Stores up to 65,000 references
Word Processing Compatibility:
Ami Pro 1.1, 2.0, 3.0
Microsoft Word 4.0, 5.0, 6.0
Microsoft Word for Windows, 1.0, 2.0, 6.0
WordPerfect 4.2, 5.1, 5.2, 6.0, 6.1
WordPerfect for Windows 5.2, 6.0, 6.1
WordStar 5.5, 6.0

Apple® Macintosh®
Macintosh computers with at least 1 Megabyte of RAM
System 4.2 or higher, includes System 7.0
Stores up to 32,000 references
Word Processing Compatibility:
MacWrite II
Microsoft Word 3.0, 4.0, 5.0, 5.1
WordPerfect 1.0, 2.0, 2.1, 3.0
ASCII/text files

DOS
IBM PC/XT/AT and 100% compatibles, including the IBM PS/2
DOS 3.3 or higher
Memory requirements:
480K RAM
Stores up to 65,000 references
Word Processing Compatibility:
Ami Pro 2.0, 3.0
Microsoft Word 4.0, 5.0, 6.0
Microsoft Word for Windows 1.0, 2.0
WordPerfect 4.2, 5.1, 6.0, 6.1
WordPerfect for Windows 5.2, 6.0, 6.1
WordStar 5.5, 6.0, 2000

NEC 9801 Series
Memory requirements:
480K RAM
Word Processing Compatibility:
WordStar
Microsoft Word for Windows

Storage media requirements:
Operation of the complete package, including the program and optional module, requires a hard disk. One megabyte hard disk storage for DOS and Macintosh. Two megabytes storage for Windows.

Reference capacity:
Space requirements vary according to the size of each reference. An "average" reference requires approximately 400 bytes of storage plus abstract (notes) if any. For example, a database of 3,000 references would require approximately 1.2 megabytes of disk storage.

Maximum number/length of authors/editors:
255 per reference. Each author may be up to 255 characters in length.

Maximum number/length of keywords:
255 per reference. Each keyword may be up to 255 characters in length.

Maximum length of journal name:
255 characters. Up to three synonyms may be defined for each journal (for example, JCI may be used for *Journal of Clinical Investigation).*

Maximum length of abstract (notes) supported:
16,000 characters.

Retrieval speed:
Independent of database size. Most retrievals are completed in two to three seconds.

CAPTURE MODULE

Import bibliographic information from CD-ROM and on-line database services, many of which are listed below. Capture is regularly updated to include additional services requested by our users.
